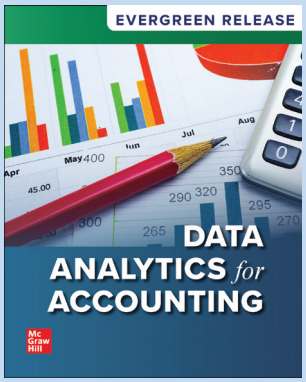
NEW! Remote Desktop Environment Now Available in McGraw Hill Connect

A Simpler Way to Access Data Analytics Labs



Teaching with Richardson: *Data Analytics for Accounting* just got easier.

Beginning in **Fall 2026**, the virtual desktop environment previously provided through the University of Arkansas has been replaced with a new solution powered by Skillable and delivered directly within Connect.

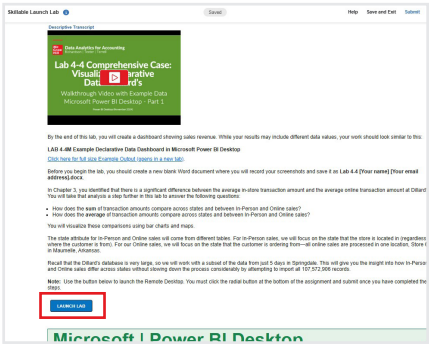
Why the Change?

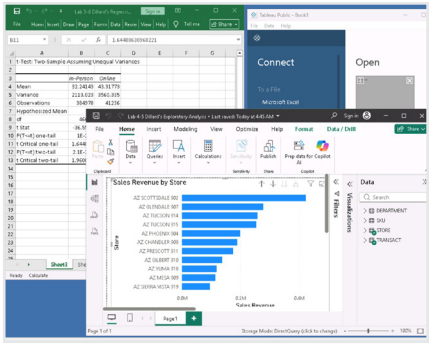
As the Data Analytics for Accounting program has grown, we've outgrown our previous remote desktop solution. The new environment, powered by Skillable and integrated directly into Connect, provides a simpler, more scalable experience with no separate accounts required. This transition also aligns with the University of Arkansas's decision to discontinue Enterprise Systems access for external users.

What's Included

The new remote desktop environment provides access to:

- Microsoft Excel
- Power BI
- Tableau
- SQL
- Dillard's Dataset
- Firefox and Edge Browsers (for saving files external to the virtual machine)
- Note: Tableau Prep and Alteryx are not included in the remote desktop environment.





What This Means for You

Access directly in Connect—no separate University of Arkansas account required

- Browser-based remote desktop environment powered by Skillable
- Streamlined student experience with a single point of access
- Designed for Richardson: Data Analytics for Accounting lab assignments
- Seamlessly integrated into your existing Connect course

The Same Great Labs. An Even Better Experience.

Everything your students need—now available directly in Connect. To learn more, visit the Instructor Resources section within Connect for additional information. *mcgrawhill.info/4fytssT?r=qr* »
