LMS Integration Experience

Starting this summer, we are rolling out a redesigned LMS integration experience for institutions on the LTIA (1.3) standard. Here's what you need to know.

What's new?

The LMS integration experience has been rebuilt with accessibility at its core to support more inclusive learning and reflect McGraw Hill's commitment to compliant, accessible products.

Learn more at mheducation.com/about-us/trust-center/accessibility.

Simplified course setup.

For instructors and administrators who want to reuse or copy content from a previous section, the process is faster, and you can get started in a fraction of the time.

Smarter section matching.

The updated pairing flow includes a built-in recommendation engine that suggests the right Connect section for your LMS course, so you can find and link the correct section quickly and confidently.

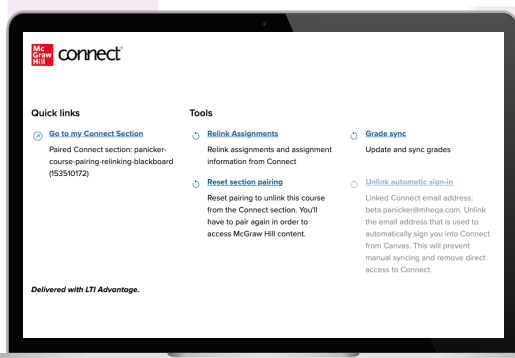

Deploy assignments without leaving your LMS.

Browse and select Connect assignments directly within your LMS and push them to students, all in one place. Less time switching between platforms, more time focused on teaching.

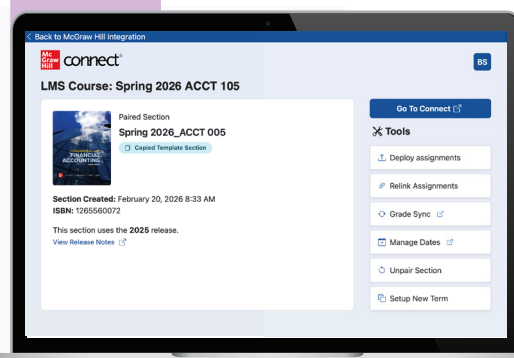

Is any action required on my end?

No. Your existing McGraw Hill tool, courses, and all configurations stay in place. The new experience works the same across all Learning Management Systems.
