Adaptive Reports – SmartBook and ALAs

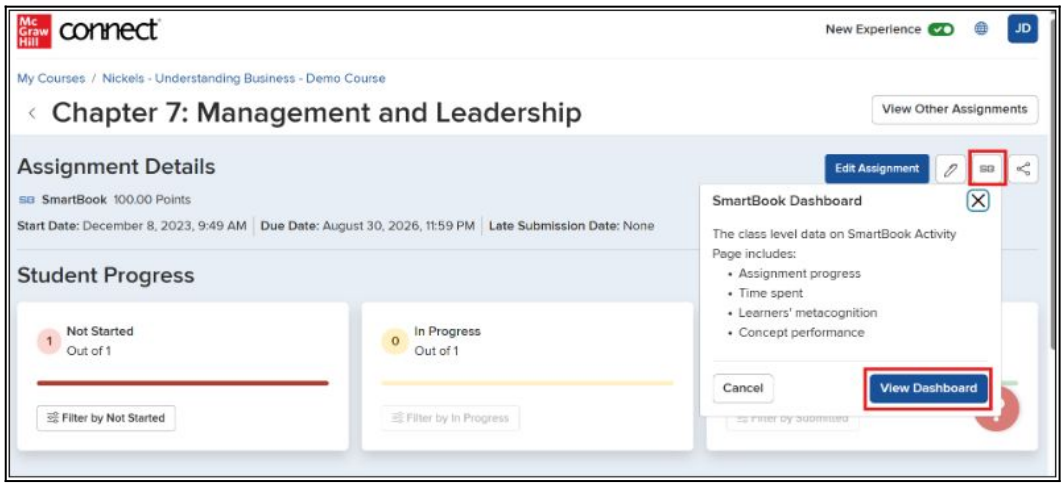

When you assign SmartBook or the Adaptive Learning Assignment, you also have access to powerful reports that identify the concepts your class is struggling to understand, and areas students might need to review before an exam.

Finding the Adaptive Reports

There are two ways to open the adaptive reports.

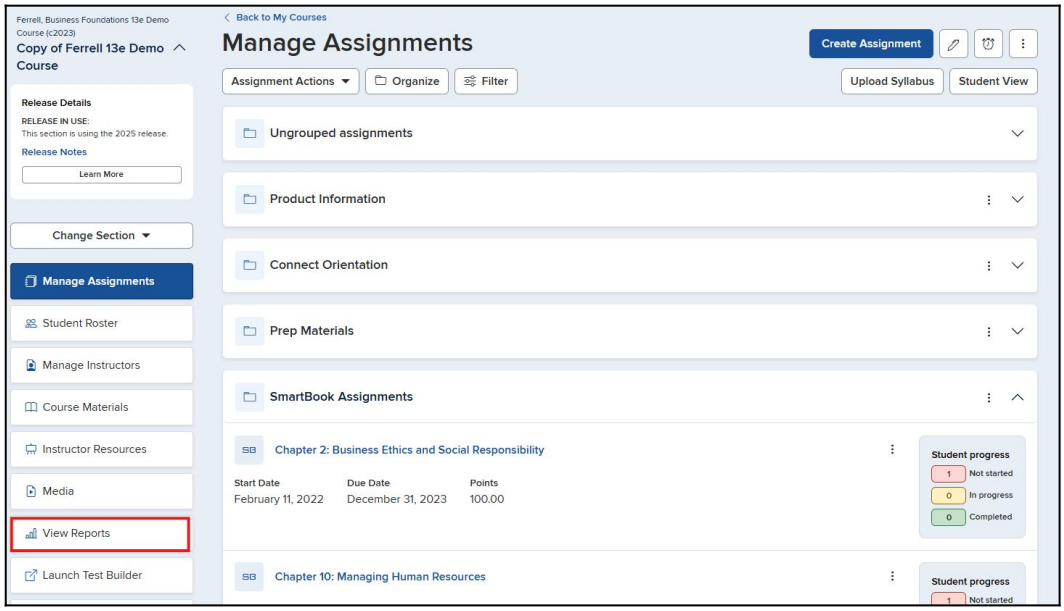

Option 1: Access the SmartBook Dashboard through Assignment Details

Open any SmartBook assignment and select **SmartBook Dashboard**, then **View Dashboard**.

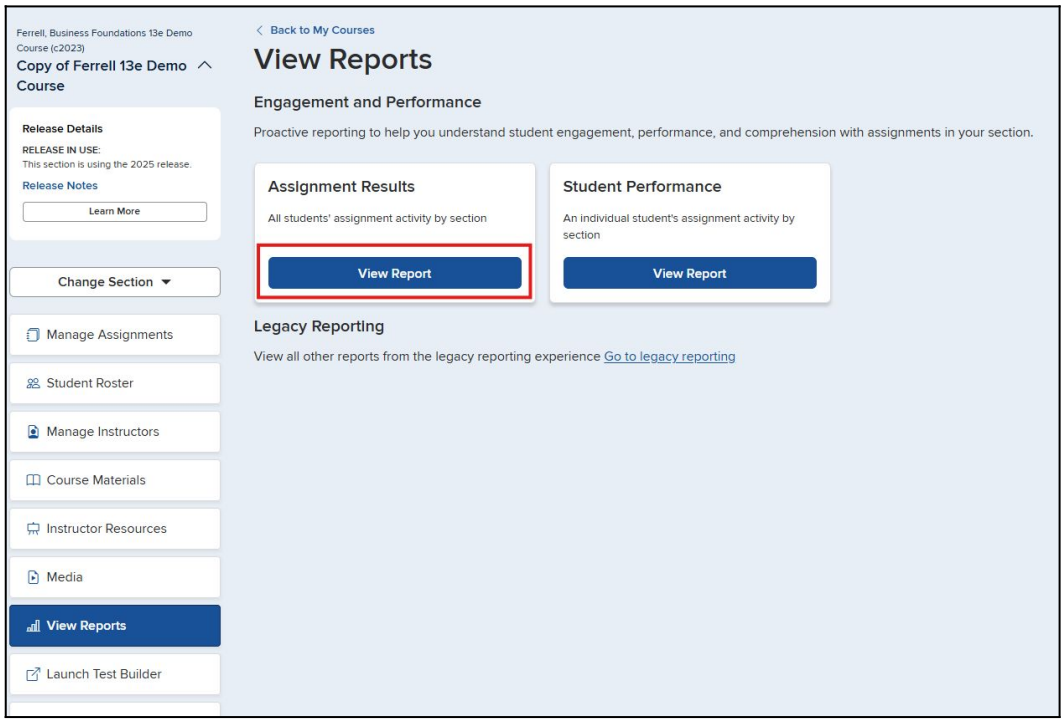

Option 2: Access the SmartBook Dashboard through View Reports

From your section home page, click **View Reports** in the left menu.

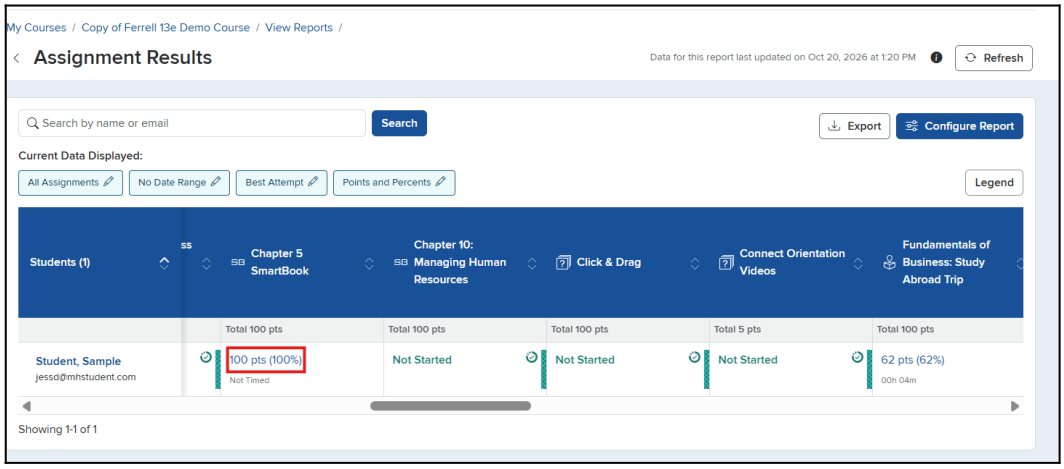

Under **Assignment Results**, click **View Report**.

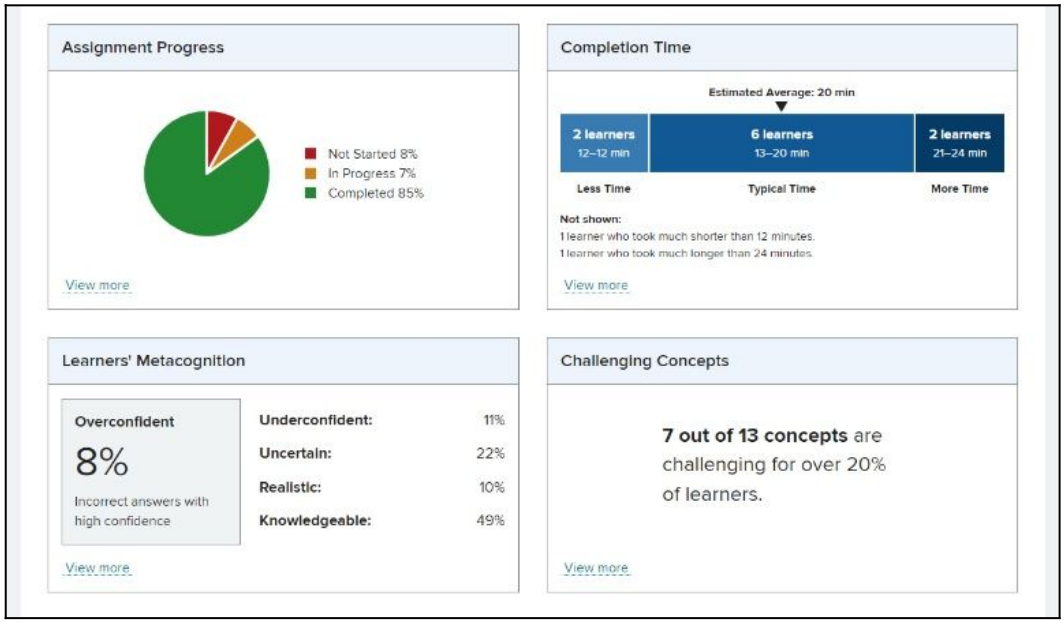

Open the Adaptive Reports Dashboard

Here, you can see a list of your students and the score they received on their adaptive assignment. Click a student's score to open the adaptive reports dashboard.

Understanding the Adaptive Reports Dashboard

This is the adaptive reports dashboard.

The **Assignment Progress** box in the upper left shows how students are progressing in the assignment, as well as a detailed breakdown of the percentage complete for each student, which can be downloaded.

The **Completion Time** box in the upper right shows student accuracy, how long it took to complete the assignment, and the time spent reviewing resources and answering questions.

The **Learners' Metacognition** box in the lower left reports students' metacognition data, or how confident they were about the answers as they went through the assignments. This helps gauge if they understood the concepts or were guessing throughout the assignment.

The **Challenging Concepts** box in the lower right summarizes how challenging the concepts in the assignment were for your students, as well as the specific concepts they struggled to answer correctly. This helps identify concepts that students might need to review for better understanding.

Click **View More** in the lower left corner of any of these four boxes to see student-specific details for that category. You can download all of this information for your reference or records.

You can also use these reports to build review assignments that help students prepare for an exam, selecting the specific learning objectives they struggled with the most.
