My favorite thing about Connect is...

“I really like SmartBook®. I think it encourages students to read and interact with the material in a new way. It also allows them some ‘quick successes’ as they are completing chapter assignments/interactives, so they may be motivated to participate in class discussions.”

Connect helped me improve my course by...

“Giving me the confidence that students could come to class prepared and that I didn't have to cover ALL the material in class. I gained the freedom to create activities that are more engaging IN class because I know students are gaining content OUT of CLASS.”

My top 3 tips for using Connect:

- “Use SmartBook.”
- “Require that each SmartBook assignment be completed BEFORE the class where that chapter is covered.”
- “Encourage students to use RECHARGE as a study tool before exams.”

My best advice for a new user:

“Connect is an innovative resource for both the students and faculty. For students, SmartBook and other activities encourage completion of reading and reviewing the material before attending class. For instructors, Connect takes away the full responsibility of creating “out-of-class” assignments and work. This alone has given me the freedom to create engaging and exciting “in-class” activities that students seem to enjoy. My students show up to class now!! They are engaged when they arrive as well..”

What Connect could mean for you:

“Students seem to enjoy using Connect and it's saved me tons of time (not having to grade weekly quizzes and small assignments because I now assign SmartBook.”
