

Anatomy & Physiology

#MHEhAPpiness

Kaushik (Kash) Dutta

Associate Professor

University of New England

Connect made me happy because...

“I was able to engage my students in most critical Blooms level on a regular basis and thus increased their likelihood of success in Anatomy and Physiology. It is a true pleasure watching the students attain mastery through practice and become successful.”

My experience using Connect was...

“extremely positive because it helped students gain critical knowledge and practice to be successful in the course. It also helped students engage in the material before, during and after a lecture topic. I have noticed that student success rate has increased over the course of time and students truly appreciate a variety of assessments through Connect.”

I chose Connect because...

“I transitioned to a large class format and I wanted my students to get the same level of attention that they would get in a smaller class, at least in terms of assessments and guided learning.”

Connect helped me improve my course by...

“implementing some of the best practice in digital teaching format! It allowed me to combine proven teaching pedagogy with digital interface. It helped me assess students on a regular basis to create comprehensive diagnostics for difficult concepts and helped level the playing field for student learning.”
