Associate Professor

Winston-Salem State University

Connect made me happy because...

“it helps my students learn better, come prepared for classes, provides them with personal feedback on what they already know and what they need to study more. It makes reading the textbook a fun activity, helps students monitor their own progress, and provides them with individual study guides. Connect makes learning FUN.”

Connect helped me improve my course by...

“allowing me to adapt my A&P class to a large format and better manage my time. I use a variety of formative and summative assessments using Connect. Using data analytics and metacognition tools helps to monitor student learning and intervene early in the semester so students adjust their study/learning styles and successfully complete the course.”

My experience using Connect was...

“very positive. I am able to effectively engage my students both inside and outside of the classroom. Interactive practice work in Connect gives my students opportunity to engage with the course content and to self-assess their learning.”

I chose Connect because...

“I piloted Connect six years ago in my A&P class and based on the outcome and student feedback, I decided to adopt Connect and associated learning and assessment tools. Based on student learning outcomes, success, performance, feedback, etc. and the reduced cost of course materials, we decided to go all digital. We have been pleased with all of the additional resources added to Connect—the interactive and adaptive nature of SmartBook, APR, etc. Student feedback has been very positive in how Connect helps them succeed in A&P courses.”
