Associate Professor

Gadsden State

Connect made me happy because...

of the ease of use. It bridged effortlessly with my colleges online platform (Blackboard). Students learn it and master it so easily and I could provide all kinds of data to the administration of my college. My online courses that I used Connect with had the same class average as my traditional courses did.

Connect helped me improve my course by...

reinforcing concepts to my students in a way that was nontraditional and allowing my students to make mistakes but still learn the material and, in turn, do better on exams. It also helped me as an instructor by allowing me to run reports to show my students progress and where each student was falling short and where they were doing well so I could go back and reinforce concepts.

My experience using Connect was...

My experience using Connect has been fantastic! I've used Connect in my online and traditional courses for the last three years and have seen great improvement in exam grades and overall averages. A big surprise has been no technical glitches! The program works so well and if a technical problem does arise, the help available is super fast and efficient. It really is an easy platform to learn for both instructors and students.

I chose Connect because...

I wanted something that would actually help my students learn the concepts I was teaching and make it enjoyable and worth their time. Also, I chose Connect because it literally would help me "connect" with my students and their progress in my courses.
