

## ARTS AND CULTURE

1870-1900

### Leap Back in Time

Andrew Carnegie lived during America's Industrial Revolution. It was a period of great change. From 1870-1900 our society began transforming into the world we know today. The automobile was perfected. The telephone was invented. And, for the first time, people bought newspapers on the street and watched motion pictures in theaters. Some people vacationed in Europe or took trips to Coney Island, New York, to experience the arts and culture of the time. How else do you think this time period helped shape our world today?
