

Environmental Science: A Study of Interrelationships

(16e) ©2022, Enger

A Concise and Conceptual View of Environmental Science for Honors Courses

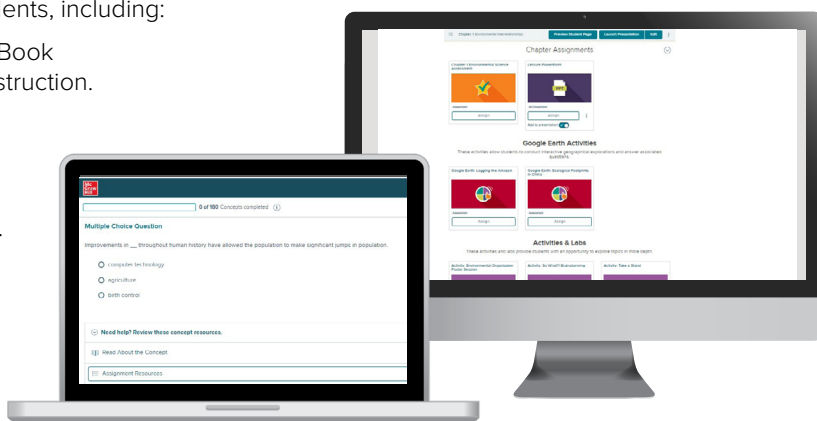

Environmental Science: A Study of Interrelationships is the perfect choice for an honors-level course with a full-color, student-friendly layout, an introductory level approach that doesn't overwhelm students with too much detail, and a concise and conceptual writing style that is both interesting and accessible. Engaging photos, illustrations, graphs and charts present detailed information to help students visualize concepts and connect them to current, real-world scenarios.

Students are taken on a scientific journey of our Earth and the relationship between humans and the natural world through Enger's interdisciplinary approach that is presented through multiple perspectives—historical, economic, political, social, and cultural. Students are lead to understand how local events can have world-wide implications to provide them with the conceptual framework they need to understand complex issues and ultimately formulate their own views about the issues that affect the world in which we live.

Powerful Digital Resources Available Anytime, Anywhere.

Environmental Science: A Study of Interrelationships includes access to robust digital resources for teachers and students, including:

- An interactive eBook and assignable, adaptive SmartBook that pinpoints knowledge gaps to effectively focus instruction.
- Google Earth activities, labs, and additional inquiry activities to give students context for the global places and topics discussed in the text.
- Comprehensive, editable test banks for each chapter.
- An online Teacher Manual featuring activities and ELL strategies experience, designed to help students learn faster, study more efficiently, and retain more knowledge
