

Making a Weather Station

WHAT YOU NEED

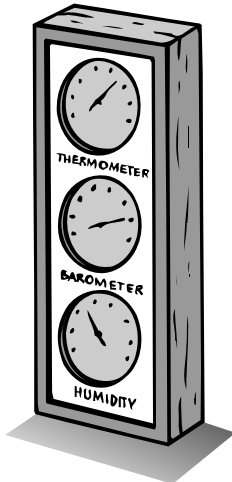

outdoor thermometer

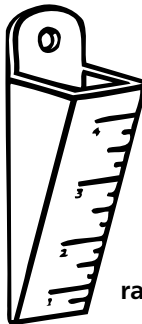

wind sock

address of a person or class in a town about 500 km to the east or west of your school

barometer

rain gauge

Find Out

Do this activity to see if there are patterns in the weather.

Process Skills

- Predicting
- Measuring
- Observing
- Communicating
- Interpreting Data
- Experimenting

Time

- One hour the first day
- Ten minutes twice a day for three weeks
- Half an hour on the last day of the third week
- Half an hour a week or two later

WHAT TO DO

1. **Write** to a person (or a class) in a town about 500 km to the east or west of your school. Arrange with the person or class to keep a chart like the one you will keep. Agree on a starting day.
2. Choose a place outside, and set up the thermometer, wind sock, and rain gauge. Make sure to choose a safe place. Put the barometer in your classroom in a place where it won't be disturbed.
3. **Set up** three charts on which you will record your observations. Use one chart for each week.
4. **Observe** the weather and check the instruments each morning and afternoon for three weeks. Try to observe at the same time each day.
5. **Record** your observations of the weather on your chart. Write down whether it is sunny, rainy, cloudy, and so on.
6. After three weeks, put a red X on each day when you recorded windy, cloudy, or rainy conditions. Put a blue X on each day when you recorded dry, clear weather conditions.
7. Use your chart and **predict** what type of weather will occur on the next day.
8. Mail a copy of your chart to the other person or class, and have them mail a copy of their chart to you. Compare your data with theirs.

Prediction: _____

Weather Information					
Week:	Temperature	Wind Direction	Precipitation	Air Pressure	Other Conditions
Day 1 Morning					
Afternoon					
Day 2 Morning					
Afternoon					
Day 3 Morning					
Afternoon					
Day 4 Morning					
Afternoon					
Day 5 Morning					
Afternoon					

Conclusions

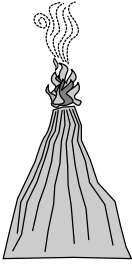

1. Did you see any patterns in the weather on your chart and on the other chart?
2. Is there a time of day when you can expect it to be warmest or coolest?
3. Does the time of day seem to have any effect on wind direction?
4. Do the wind directions that you recorded relate in any way to the weather recorded by the other group?

New Questions

1. Why might it be helpful to know about weather in different locations?
2. Write a new question you have about using weather data to predict weather patterns.

Name _____

ACTIVITY

Making Magic with Air

Part A

What happened when you put the jar in the plastic box?

Part B

What do you **predict** will happen when you turn the jar upside down?

What happened when you took your hand away from the cardboard?

Part C

What do you **think** will happen when one balloon is popped?

What happened when you popped one balloon?

Name _____

Conclusions

① In Part A, why doesn't water fill up the glass and get the paper wet?

② How can you **explain** what happened in Part B?

③ In Part C, which end of the ruler dropped? What property of air caused this to happen?

Asking New Questions

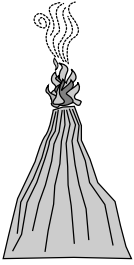

① Which property of air causes your ears to pop?

② Which property of air helps you keep a bicycle tire inflated?

Activity Journal

Lesson 2 • Water Cycle and Clouds

Name _____

ACTIVITY

Making a Cloud

What happened to the water on the chalkboard?

How does the outside of the jar or cup look?

Record what you see on the outside of the jar or cup.

After 10 minutes

After 20 minutes

After 30 minutes

Name _____

Conclusions

① What did you **observe** when you wiped the chalkboard with the wet towel?

② What did you **observe** after you poured the water into the jar?

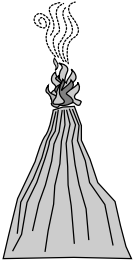

③ What did you **observe** after you added ice to the jar?

Asking New Questions

① In the jar of ice and water, where did the water on the outside of the jar come from?

② **Predict** what would happen to the water around the bottom of the jar if you let it sit for two days.

Name _____

ACTIVITY

Making a Barometer

Make a bar graph to **record** your **observations** in the space below.

How do your results compare with the results from the other groups or with the newspaper or TV weather reports?

Name _____

Conclusions

- ① What happened to make your barometer **record** a high pressure on the card?

- ② What type of weather did you see on days with high air pressure? What type of weather did you see on days with low air pressure?

- ③ On the basis of your observations, can you **predict** what weather conditions will be on the fifth day?

Asking New Questions

- ① What connection did you notice between air pressure and temperature?

- ② What type of reading would you expect from your barometer if warm air were to move into your area?
